

OsmoseSound - DJ Osmose 7 inch vinyl record stabilizer care

- *When you receive the stabilizer wipe off the oil with a dry clean cloth.*
 - Keep Dry
 - Store in protective net or cloth jewelry bag when traveling.
 - Clean with jeweler's cloth.
 - Every so often apply some gun oil like Barricade by Birchwood Casey. You can find a can or little self contained wipes of this at sporting good stores like Dick's or Academy. Good to let it sit for an extended period of time with this on there.
 - For deep cleaning the best thing I have found is Scotch-Brite Non-Scratch scour pads. Move in continuous circular motion. Do not apply pressure with your fingers. Try to keep the contact between the pad and stabilizer gentle and consistent. This will take some time, but should work well. Too much pressure however will leave some marks.
-
- In regards to moisture please note that this is a raw metal product. It should be kept dry as it is not the amount of water or moisture that the product comes in contact with, but the length of time.
